

3D printer

Resources

- [hotend change](#)
 - mount heatbreak and nozzle touching together and with **0.5mm gap** between head and nozzle
 - preheat hotend at ABS temp
 - fix nozzle with 1nm torque
 - [E3D V6 assembly](#)
 - [temperature tower](#)
 - set combing mode to off

z offset: subtract 0.25 to A4 paper without friction and without warm up

Flsun Super Racer

todo

Ender3 v2

- bed 70
- head 225
- Retraction Distance: 6.5mm.
- Retraction Speed: 25mm/s.
- Maximum Retraction Count: 10.
- Minimum Extrusion Distance Window: 10mm.
- Combing Mode: ON and set to "Within Infill" (no stringing).
- fan 100% for details or fan 0% for stranght
- [bltouch](#)
- [jyers firmware settings in octoprint](#)

Geeetech A20

first layer speed
10mm/s

into start g-code
keep only first G28
as below

```
G28; auto home
G1 Z15 F300; linear move, 15mm vertical and set feedrate at 300
M107; turn fan off
G90 ; absolute positioning
M82 ; This command is used to override G91 and put the E axis into absolute
mode independent of the other axes.
G92 E0; set absolute position
M107 ; M107; turn fan off
G0 X10 Y20 F6000 ; move to X 10 mm Y 20 mm , feed rate 6000
G1 Z0.8 ; move Z to 0.8 mm [WHY MOVE VERTICALLY?]
G1 F300 X200 E40 ; push 40 mm of filament while moving at 300 mm/min to
position X=200
G1 F1200 Z2 ; move to position Z=2 at 1200 mm/min
G92 E0 ; set the extruder position as the new zeros
```

fetch marlin code and checkout same branch release on Marlin.git and Configurations.git

[apply this](#)

patch

```
git clone https://github.com/MarlinFirmware/Marlin.git
#git clone https://github.com/Jyers/Marlin.git

cd Marlin
check out latest release branch, for example 2.0.9.2
git clone https://github.com/MarlinFirmware/Configurations.git
cd Configurations
check out latest release branch, for example 2.0.9.2
#git clone https://github.com/Jyers/Configurations.git

# copy Configuration.h and Configuration_adv.h from examples
cd ..
rsync -av Configurations/config/examples/Geeetech/A20/ Marlin/

code .
// select default shell to bash Terminal: Select Default Profile

// change MOTHERBOARD
#define MOTHERBOARD BOARD_GT2560_V4_A20

// enable bltouch if present
```

```
// comment PROBE_MANUALLY and decomment BLTOUCH
//#define PROBE_MANUALLY
#define BLTOUCH
#define Z_MIN_ENDSTOP_INVERTING false // Set to true to invert the logic of
the endstop.
#define Z_MIN_PROBE_ENDSTOP_INVERTING false // Set to true to invert the
logic of the probe.
#define Z_SAFE_HOMING

// temporary
#define X_BED_SIZE 200
#define Y_BED_SIZE 200
#define X_MIN_POS -10

// original plate 260x260
//#define X_BED_SIZE 255
//#define Y_BED_SIZE 255
//#define Y_MIN_POS -5
```

install marlin auto build extension

change vscode settings.json

[javascript](#)

```
{
  "terminal.integrated.defaultProfile.linux": "bash"
}
```

To upload firmware add a **custom FFF** (no geeetech A20 model) printer and use upload firmware menu

- [z offset wizard](#)
- [pid tuning](#)

Anycubic Predator
