

GOOGLE HOME

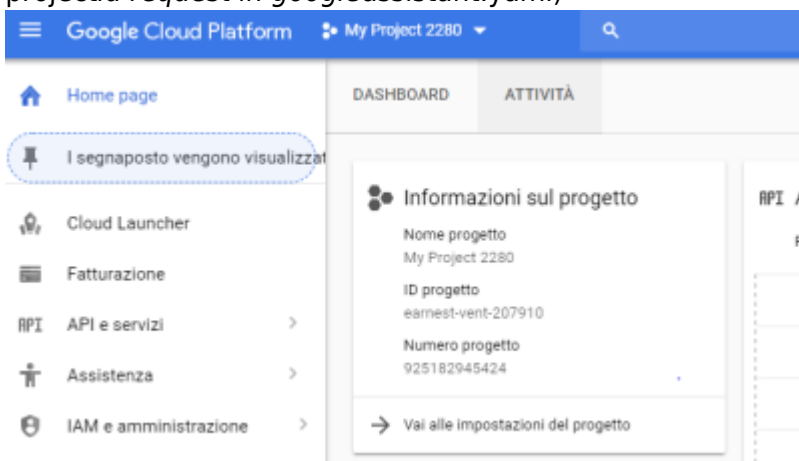

- Create a new project in the <https://console.cloud.google.com/home/dashboard> console
 - Specify project name and country

- Now you get a new project to the cloud console. Here you get a new project_id.
- Enable HOMEGRAPH API to the new project.

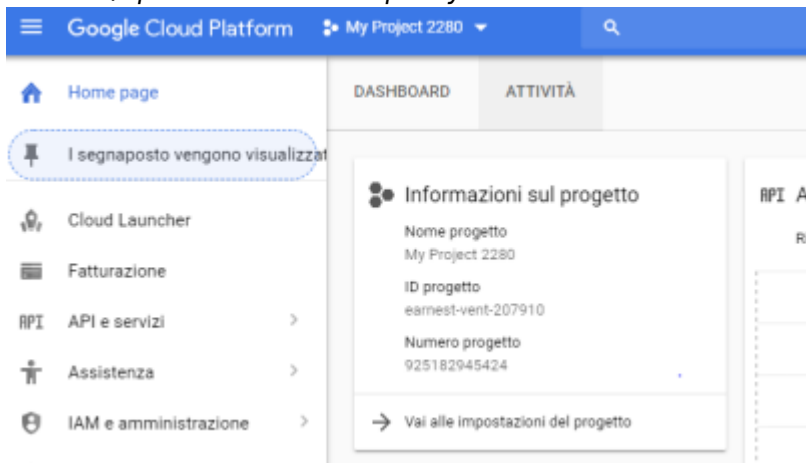

- Generate a new API key (the same Api key of apikey: *in googleassistant.yaml*)
- IAM E amministrazione/impostazioni/ESEGUI LA MIGRAZIONE (By this, they share the same projectid request in *googleassistant.yaml*)

- Create a new project in the developer console. <https://console.actions.google.com>
- Add/Import project, give it a name (The same project created by the Google Cloud platform above)
- Click on Home Control card, select the Smart home recommendation
- Create an Action, under the build section. Add in your url: [https://\[YOUR HOME ASSISTANT URL:PORT\]/api/googleassistant](https://[YOUR HOME ASSISTANT URL:PORT]/api/googleassistant), replace the [YOUR HOME ASSISTANT URL:PORT] with the domain / ip address and the port your Home Assis

een.

- * Account linking is required for your app to interact with Home Assistant. Set this up under the Quick Setup section
 - Leave it at the default No, I only want to allow account creation on my website and select Next
 - For the Linking type select OAuth and Implicit - Client ID: The clientid from your Home Assistant configuration above
- Authorization URL (replace with your actual URL): [https://\[YOUR HOME ASSISTANT URL:PORT\]/api/googleassistant/auth](https://[YOUR HOME ASSISTANT URL:PORT]/api/googleassistant/auth). If you have set apipassword: add this password to the URL [https://\[YOUR HOME ASSISTANT URL:PORT\]/api/googleassistant/auth?apipassword=\[YOUR API PASSWORD\]](https://[YOUR HOME ASSISTANT URL:PORT]/api/googleassistant/auth?apipassword=[YOUR API PASSWORD])
- CONFIGure your client. Add scopes for email and name.
- Testing instructions: Enter anything. It doesn't matter since you won't submit this app.
 - Back on the overview page. Click Simulator under TEST - you don't have to actually test .
 - If you haven't already added the component configuration to configuration.yaml and restarted Home Assistant, you'll be unable to continue until you have.

google_assistant.yaml

```
<code> googleassistant: projectid: someproject-2d0b8 clientid: [long URL safe random string]
accesstoken: [a different long URL safe random string] agentuserid: [a string to identify user]
apikey: [a Homegraph API Key generated for the Google Actions project] exposeddomains:
```

- switch
- light
- group entityconfig: switch.kitchen: name: Custom Name for Google Assistant aliases: - bright lights - entry lights light.livingroom: expose: false room: living room </code>

- Reset Home Assistant and TEST ACTION

- Open the GOOGLE HOME APP and go into Settings > Home Control
- Click the + sign, and near the bottom, you should have [test] your app name. Selecting that should lead you the screen where you can set rooms for your devices or nicknames for your devices.
- If you want to allow other household users to control the devices:
 1. GO to the settings for the project you created in point 1 in the developer console.
 - UNder the gear icon, click Permissions
 2. Click Add, type the new user's e-mail address and choose Project → Editor role
 3. Have the new user go to developer console and repeat steps starting from point 4
 - Open the Google Assistant app and go into Settings > Home Control
 - Click the + sign, and near the bottom, you should have [test] your app name. Selecting that should lead you the screen where you can set rooms for your devices or nicknames for your devices.
