

Smartband

You can simply go to the configuration page of your HA App for Android, select “configure sensors” and scroll down until you find the sensor “Last Update Trigger”. In the newest version of the HA App there is now the opportunity to not just listen to the Broadcasts that come from the Android system but also to listen to custom broadcasts you can define at the bottom of the options. If you're using Gadgetbridge I would recommend you to set the two broadcasts `nodomain.freeyourgadget.gadgetbridge.WokeUp` as well as `nodomain.freeyourgadget.gadgetbridge.FellAsleep`. Next go to your **Gadgetbridge** App and enable under the device settings the option “Send broadcast”.

And that's it already! Your “Last Update Trigger” will now show one of the two broadcasts you defined above if your fitness tracker realizes you fell asleep. You can use this e.g. as a trigger to turn off the lights when you fall asleep or just let your alarm stop after your fitness tracker realized, that you woke up.
