

android tensor flow projects 01

prereq

bazel

```
echo "deb [arch=amd64] http://storage.googleapis.com/bazel-apt stable
jdk1.8" | sudo tee /etc/apt/sources.list.d/bazel.list
curl https://bazel.build/bazel-release.pub.gpg | sudo apt-key add -
sudo apt-get update && sudo apt-get install bazel
```

tensorflow

clone github tensorflow and build

```
cd /lab
git clone --depth 1 https://github.com/tensorflow/tensorflow.git
tensorflow.git
cd tensorflow.git
```

update WORKSPACE file

```
android_sdk_repository(
    name = "androidsdk",
    api_level = 23,
    # Ensure that you have the build_tools_version below installed in the
    # SDK manager as it updates periodically.
    build_tools_version = "26.0.1",
    # Replace with path to Android SDK on your system
    path = "/opt/android-sdk",
)
#
android_ndk_repository(
    name="androidndk",
    path="/opt/android-sdk/ndk-bundle",
    # This needs to be 14 or higher to compile TensorFlow.
    # Please specify API level to >= 21 to build for 64-bit
    # architectures or the Android NDK will automatically select biggest
    # API level that it supports without notice.
    # Note that the NDK version is not the API level.
    api_level=14)
```

git clone <https://github.com/azainab/androidTFDetect/> cd androidTFDetect # download assets from <https://drive.google.com/file/d/0B4dPZkgiYI-SWW1TNTBpNUtKbGs/view?usp=sharing> cd assets unzip ~/Scaricati/Place\ in\ assets\ folder.zip </code>

import project in android studio

```
buildscript {  
    repositories {  
        google() // Gradle 4.0+  
        maven { url "https://maven.google.com" } // Gradle < 4.0  
        jcenter()  
    }  
  
    dependencies {  
        classpath 'com.android.tools.build:gradle:3.0.1'  
        classpath 'org.apache.httpcomponents:httpclient:4.5.2'  
    }  
}
```
