

Cordova

Install

Install nodejs and npm

```
sudo apt-get install nodejs npm
```

Install cordova

```
sudo npm install -g cordova
```

cordova need node and ubuntu install nodejs

```
sudo ln -s /usr/bin/nodejs /usr/local/bin/node
```

install cordova-browser from git to have linux support

```
sudo npm install -g git://git.apache.org/cordova-browser.git
```

Update

```
sudo npm update -g
```

Install Android SDK

Create /etc/etc/profile.d/android.sh or add in .bash_profile

```
export ANDROID_HOME=/lab/android-sdk-linux/  
export PATH=$PATH:$ANDROID_HOME/tools:$ANDROID_HOME/platform-tools
```

Project

Create project

```
cordova create /lab/peper-memory org.csgalileo.peper.memory PeperMemory
```

Add android support

```
cd /lab/peper-memory  
cordova platform list
```

```
cordova platforms add android
cordova platforms add browser

# temporary patch
# cp /usr/local/lib/node_modules/cordova-
browser/bin/templates/project/cordova/run ./platforms/browser/cordova/run
```

Add to platforms/browser/cordova/run

```
case 'linux':
    spawn('chromium-browser', ['--test-type', '--disable-web-security', '-
-user-data-dir=/tmp/temp_chrome_user_data_dir_for_cordova_browser',
project]);
    break;
```

Crosswalk

Optionally it is possible to use crosswalk instead of android webview

Add android platform to project

```
cordova platforms add android
```

Download [<https://crosswalk-project.org/documentation/downloads.html>|crosswalk]

```
CROSSWALK=/lab/crosswalk/crosswalk-cordova-10.39.235.15-arm
rm -fR platforms/android/CordovaLib/*
cp -a ${CROSSWALK}/framework/* platforms/android/CordovaLib/
cp -a ${CROSSWALK}/VERSION platforms/android/
```

Add to platforms/android/AndroidManifest.xml

```
<uses-permission android:name="android.permission.ACCESS_WIFI_STATE" />
<uses-permission android:name="android.permission.ACCESS_NETWORK_STATE" />
```

Build both the CordovaLib and xwalk_core_library

```
cd platforms/android/CordovaLib/
android update project --subprojects --path . --target "android-19"
ant clean debug

cd .. # platforms/android/
rm -Rf ant-gen
rm -Rf ant-build
cd ../..
cordova build android
```

Manage project

View project detail

```
cordova info
```

Add plugins

```
cordova plugin add org.apache.cordova.device
cordova plugin add org.apache.cordova.console

# cordova plugin add https://github.com/donaldp24/CanvasCameraPlugin.git &&
cordova prepare
```

Search plugins

```
cordova plugin search <text>
```

Update corbova inside project

```
cordova platform update android
```

Test project

```
cordova emulate browser
```

Release

```
cordova build --release android
```

[<http://developer.android.com/tools/publishing/app-signing.html> sign and align]

Video autoplay

CordovaApp.java

```
super.init();
super.appView.getSettings().setMediaPlaybackRequiresUserGesture(false);
```

Posizionare un set di src dopo il device ready

```
$('#video1')[0].src =
"http://192.168.2.125:8000/lib/exe/fetch.php?media=contrade:pergari:pergari_
int.webm";
```

GPIO

jni contain NDK project

```
|— Android.mk
|— gpio.c
|— gpio.h
|— jni_gpio.c
```

Rebuild this project running 'ndk-build into jni folde'r

Android.mk

```
LOCAL_PATH := $(call my-dir)

include $(CLEAR_VARS)
LOCAL_MODULE := gpio_test
LOCAL_SRC_FILES := gpio.c
LOCAL_LDLIBS += -llog
LOCAL_CFLAGS += -DEXEC
include $(BUILD_EXECUTABLE)

include $(CLEAR_VARS)
LOCAL_MODULE := libgpio
LOCAL_SRC_FILES := gpio.c jni_gpio.c
LOCAL_LDLIBS += -llog
include $(BUILD_SHARED_LIBRARY)
```

gpio.c

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <poll.h>
#include <fcntl.h>
#include <unistd.h>
#include <sys/stat.h>
#include <sys/types.h>

#include "gpio.h"
