

Install Ubuntu 21.04

to maintain Windows installed:

1. disable BitLocker (Impostazioni->Aggiornamenti Sicurezza->Crittografia->Disabilità)
2. disable Secure Boot (from BIOS)
3. re-order the booting devices (from BIOS)
3. use a USB to boot the ubuntu 21.04

Possible issues

Backlight / nomodeset

In case you are using a laptop with intel i7 gen. 11th and iRIS XE graphics you should use kernel **5.11.0-16-generic** A possible solution is to add the following lines in **/etc/default/grub**:

```
GRUB_DEFAULT=saved
GRUB_SAVEDEFAULT=true
```

Then reboot the system, select *Opzioni avanzate per Ubuntu* and *Ubuntu, con Linux 5.11.0-16-generic*. You must do that only once to save your preferences.

Wi-fi

To install the correct drive you should follow these command (and might read the discussion at this [link](<https://forum.ubuntu-it.org/viewtopic.php?t=637471>)):

1. Make sure you have a proper build environment and dkms installed.
2. `sudo su`
3. `apt install bc module-assistant build-essential dkms`
4. `m-a prepare`
5. `apt install rtl8821ce-dkms`
