

# Ionic

## Prerequisites

### nodejs (latest)

```
sudo apt-get install build-essential
curl -sL https://deb.nodesource.com/setup_6.x | sudo -E bash -
sudo apt install nodejs
```

### nodeenv

```
sudo apt-get install python-pip
sudo pip install nodeenv
```

## Project

### Create library

```
LIB=<some-path>
nodeenv --node=0.10.33 $LIB
. $LIB/bin/activate
```

```
npm install -g ionic
npm install -g bower
```

update

```
npm update -g ionic cordova
```

### Create project

Activate library

```
. $LIB/bin/activate
```

```
NAME=PeperStart
ionic start $NAME blank
cd $NAME
ionic browser add crosswalk  #(this command enable also android platform)
```

## Update libs

```
. $LIB/bin/activate
npm install -g ionic

cd <project>
ionic lib update
```

## Eclipse

\$P is \$NAME/platforms/android path

- Import → “Existing Android Code ...” → \$NAME/platforms/android and deselect all subprojects
- Project → Build Path → Configure Build Path
  - Source → Link source → \$P/Cordova/lib/src with name src-cordova/lib
  - Libraries → Add external JAR →  
\$P/Cordova/lib/xwalk\_core\_library/xwalk\_core\_library\_java\_app\_part.jar
  - Libraries → Add external JAR →  
\$P/Cordova/lib/xwalk\_core\_library/xwalk\_core\_library\_java\_library\_part.jar

## Native lib integration

Create zip file named **gpio.jar** and put into platforms/android/libs

```
lib
├── armeabi
│   └── libgpio.so
```

build.gradle search inside libs for \*.jar (see dependency section)

## Tips

### Video fullscreen autoplay

```
<video ng-controller="startVideo" controls="" style="width:100%;
height:auto" autoplay="false">
  <source src=""></source>
</video>
```

```
.controller('startVideo', function($scope) {
  angular.element('video').attr('src', 'http://...');
});
```
