

# simon

speech model basically consists of two parts:

- Language model: Describes all existing words and what sentences are grammatically correct. It will be created from your active scenario
- Acoustic model: Describes how words sound. It will be either built solely through your voice recordings (training) or with the help of a base model

SPHINX backend“ uses:

- PocketSphinx recognizer
- SphinxTrain model generation backend

## install

```
sudo apt install simon
```

```
sudo apt install libsphinxbase3 python-sphinxbase sphinxbase-utils  
pocketsphinx
```

edit

[/usr/lib/sphinxtrain/etc/sphinx\\_train.cfg](#)

```
$CFG_CD_TRAIN = 'no';
```

## model

For small amount of data for training without context-dependent models use continuous model instead of semi-continuous one and this error will be solved.

This warning is caused by the fact you disabled context-dependent training and used semi-continuous model. You can ignore this error until you have more data and use context-dependent training.

training

```
mkdir /tmp/test  
cd /tmp/test
```

```
sphinxtrain -t test setup
```

now we have

```
.
```

```
└─ etc
   └─ feat.params
   └─ sphinx_train.cfg
   └─ test.dic
   └─ test.filler
```

adjust sphinx\_train.cfg TODO
